

CERTIFICATE OF VOLATILITY

Marvin Test Solutions, Inc. certifies that the **GX1222 Wideband Amplifier PXI Card** may contain internal or on-board memory, does not retain any data or information other than generic information used by the card (such as calibration data). Users can not write directly to the non-volatile memory. Any additional product configuration data that may have been changed by the controlling program is erased once the power has been turned off.

Should you have further questions about memory requirements or require a declaration of volatility, please contact our Customer Technical Services Team at 1-888-837-8297 or 1-949-263-2222.
